1.2.3.4/32

7.8.9.10/32

www.awsdevopsteam.net

Alias: DNS-URL in AWS

Load balancer endpoint: dualstack.load2-2068187317.eu-west-1.elb.amazonaws.com

S3 bucket endpoint: <http://www.awsdevopsteam.net.s3-website-us-east-1.amazonaws.com>

Naked domain: awsdevopsteam.net

1- Alias is like an **extension** of the other record
It is not a standalone record

2- Best practice:

Alias is used for AWS resources

Cname is used for domains

ALIAS Record-S3 Static Web hosting URL

ALIAS Record-ELB URL

Publishing the website

www.awsdevopsteam.net
