AWS Infrastructure
AWS Availability Zones

- An Availability Zone is a facility where the data centers are located.

- There are currently 105 Availability Zones

- All AZ's in an AWS region are interconnected with metro fiber.

- All traffic between AZ's is encrypted.

- AZ's are physically separated by a meaningful distance, many kilometers, from any other AZ, although all are within 100 km (60 miles of each other).

AWS Infrastructure
AWS Local Zones

- AWS Local Zones are a new type of AWS infrastructure deployment that places AWS compute, storage, database, and other select services closer to large population, industry, and IT centers **where no AWS Region exists today.**

- Each AWS Local Zone location is an **extension of an AWS Region**
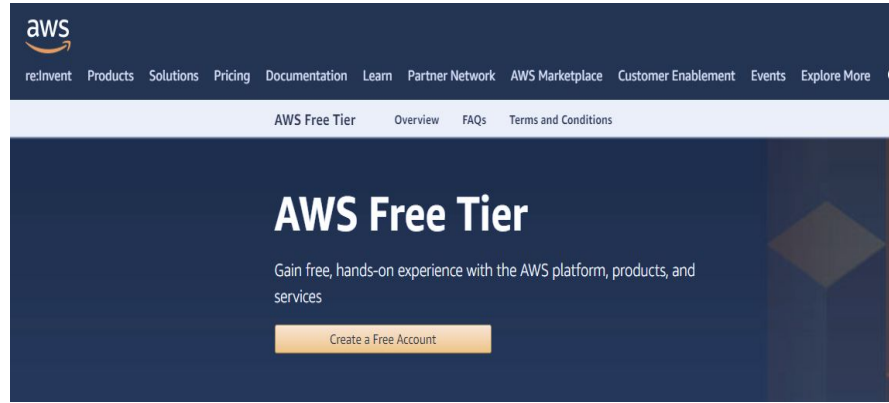

- There are 34 Local Zones currently

AWS Free Tier

What is AWS Free Tier?

- The AWS free tier is a account type that lets you gain free, hands-on experience with AWS products and services.

- The AWS free tier provides customers the ability to explore and try out aws services free of charge up to specified limits for each service.

AWS Free Tier
Free Tier Offer Types

The Free Tier is comprised of three different types of offerings;

- Services with a **12-month free tier** allow customers to use the product for free up to specified limits for one year from the date the account was created.

- Services with an **always free** offer allow customers to use the product for free up to specified limits as long as they are an aws customer.

- Services with a **short term trial** are free to use for a specified period of time or up to a one-time limit depending on the service selected.

AWS Free Tier
Billing Policy

- You are recommended to set **a billing alarm** to stay within the limits.

- If your application use exceeds the free tier limits, you simply pay standard, **pay-as-you-go service rates.**

- AWS Free Tier is applied to your **monthly usage**. It will expire on the 1st day of each month and does not accumulate.
